RETHINK Workshop Series:

Exam Room Design Insights

Set up and on display during the CEO, COO, and CMO Council Meetings

CNECT welcomes you and your staff to visit the show room.

As healthcare shifts from fee-for-service to a value-based care model, healthcare organizations have been challenged to fundamentally improve care delivery through a better ambulatory care strategy. The Quadruple Aim has provided a framework with focus placed on improving patient outcomes and the patient/provider experience while reducing cost and waste. However, it is easy to under appreciate the foundational work that goes into improving the point of care ecosystem. Many healthcare organizations have asked Midmark to sponsor, lead and facilitate an on-site simulation/workshop focused on exam room design and clinic workflow. This complimentary 2-hour collaborative workshop takes a deeper look into what many progressive institutions are doing to design better care.

Stakeholders Who Should Attend:

- Physician/Nurse Leadership
- Clinical Operations
- Process Improvement
- Planners
- Designers
- Quality/Risk
- Architects
- Construction
- IT
- Supply Chain
- Clinical Engineering
- Facilities Management

Exam Room Insights:

- Quadruple Aim
- Cellular Design
- Flexible Design
- Vital Signs Acquisition
- ADA Accessibility
- Safe Patient Handling
- Caregiver Ergonomics
- Patient-Staff Flow
- Minimizing Bottlenecks
- Patient-Caregiver Interaction
- Accessing Computer/EMR
- Seamless EMR Device Integration
- Standardization
- Scalable Outpatient Efficiencies
